

THE OMNI ADVANTAGE

Purchasing the right equipment from one supplier makes sense when it comes to customizing for the application. Our product teams work closely together to design the scissor lift that will integrate with all our other equipment. Whether it is gravity roller conveyor, tilters, AGV's or chain driven live roller, purchasing from Omni takes away the issues that often arise when components are received from multiple manufacturers. This is the *Omni Advantage*.

WHEN A STANDARD SCISSOR LIFT JUST WON'T CUT IT!

Our custom scissor lifts rise to the challenge when a standard lift won't get the job done. Omni's skill at designing specialized lifts and our ability to integrate with our other quality material handling products, turns your handling problems into productive solutions. Some of our popular options include special table sizes, mobility packages, pit mounted units and high cycles packages. Since Omni is also a preferred supplier of other material handling equipment, we can easily customize the lift to your specifications and utilize your components of choice.

FEATURES

- Small footprints and custom table sizes accommodate even the tightest spaces
- Table top mounting holes modified to suit customer needs for quick integration
- Three actuations to choose from- hydraulic, pneumatic and mechanical
- Custom configurations and finishes to endure the harshest environments
- Typical configurations include tandem, double wide and multitier
- In-house integration with other Omni supplied conveyor
- Capacities ranging from 500 to 100,000 pounds
