

## GIVING YOUR LIFT A NEW LEASE ON LIFE

Today, industry faces increasing pressures to reduce costs, boost return on investment, maintain productivity and support environmental responsibility. Remanufacturing is once again a critical part of the industrial landscape.

Omni Metalcraft is facing the challenge by utilizing our expertise to provide lifting equipment that will assist our customers in achieving cost reductions, environmental stewardship and much more.

### What is Remanufacturing?

Simply stated, our remanufacturing is a process whereby the original product is disassembled, the welds are inspected, parts are cleaned, corrosion and rust are removed, worn or obsolete parts are replaced and the equipment is painted and reassembled to sound working conditions that meet or exceed Omni Metalcraft's original specifications. A "like new" Scissor Lift will be returned to the customer with an extended life and the warranty of a new machine at a fraction of the cost of new equipment.

### How The Omni Reman Program Works?

Our program functions as a closed loop system, with the purchase of a scissor lift the customer is automatically entitled to this service.

During the life cycle of the lift, when the equipment is ready for remanufacture, the core (lift) will be returned to Omni. The lift will then go through a full remanufacturing audit. An audit report will be returned to the customer detailing what work should be performed, complete with an estimated cost and any recommended upgrades or retro-fitting options.

The remanufacturing process will bring your equipment up to date with consideration given to the latest safety requirements.

**Simulated Lift Before Remanufacture**  
Corroded and rusted

**Simulated Lift After Remanufacture**  
Inspected, repainted and back to OEM specifications

**Simulated Lift Remanufactured Lift Retrofitted with New Equipment**  
Now suitable for other applications

### Advantages of Remanufacturing

- Increased return on investment
- Extended life cycle on existing equipment
- Remanufactured to OEM specifications, not a third party's
- "As good as new or better", with a warranty to match
- Equipment can be retro-fitted at time of remanufacture with other equipment
- Lift will be up to date with the latest safety requirements

Your company will be participating in the ultimate form of recycling, decreasing expenditures and preserving resources
